Sagar Tenure Social Media Post (Facebook, Twitter, LinkedIn, Website)

entrinsic bioscience congratulates Chief Science Officer and company co-founder, Dr. Sadasivan Vidyasagar, on his tenure appointment at the University of Florida. Dr. Vidyasagar’s groundbreaking discovery of the ability of precise combinations of functional amino acids to modulate epithelial proteins led to the development of enterade®, clinically proven to significantly reduce the side effects of chemotherapy and radiation treatment for cancer patients. 30,000+ oncology patients have already benefitted from enterade, and Dr. Vidyasagar’s continued discoveries have entrinsic poised to disrupt multiple categories, including the beverage industry, skin care, gastro-intestinal (GI) consumer health, and GI therapeutics (including potentially groundbreaking treatments for Celiac disease, Crohn’s, IBS, Colitis, Cystic Fibrosis GI complications and other GI disorders with high unmet medical need).
